15 December 2010 – Logimine opens new office in North America

Logimine S.A .S. (www.logimine.com), European leader in management systems for open-air mines, today announces that it has opened a new office in Montreal to better support its clients and extend its coverage area in North America where the demand for production control and greater efficiency in mining is high.

The new office is managed by Alpha Barry, President.

“The opening of the Montreal office represents a tremendous opportunity for Logimine to better serve its clients in Canada and to equip more and more mines and quarries in North America” comments Alpha Barry.

The North America office's address is Logimine Inc., 3575 St-Laurent, suite 406, Montreal, QC, H2X 2T7. The main telephone and fax number is +1 - 514 380 2245

About Logimine

Logimine S.A.S. is the first European company to specialise in open air mining control systems to minimize production costs and cut maintenance costs.

Established in 1997, Logimine develops, manufactures and integrates production control software (PCC4), intelligent on-board terminals and weighing equipment (L2X Series), wireless network and real-time radio-GPS communication systems (L21-R and L22-R series).

Its systems enable real-time tracking of vehicle and tool movement and position in 3 dimensions, providing monitoring of time, distance and critical systems enabling management of dispatch, loading, drilling and blasting activities, as well as quality and stock control.

Logimine systems are used on five continents. They have helped a variety of mines and quarries worldwide increase their operational productivity by up to 30% while optimizing quality control.

Logimine's head office is located in Nîmes, France. For more information, visit www.logimine.com or email info@logimine.com.
